PROFESSIONAL SUMMARY

Detail-oriented and results-driven **MERN Stack Developer** with 1+ year of practical experience building scalable, full-stack web applications and delivering custom solutions for freelance clients. Adept at engineering secure **REST APIs**, architecting robust database structures with **MongoDB**, and crafting dynamic, responsive user interfaces using **React.js** and **Next.js**. Proven track record of managing end-to-end production deployments utilizing **AWS**, **Firebase**, and **Cloudinary**. Strong collaborator skilled in gathering client requirements, optimizing application performance, and maintaining clean code architectures via **Git/GitHub**.

TECHNICAL SKILLS

Frontend Architecture: React.js, Next.js, JavaScript (ES6+), TypeScript, Tailwind CSS, HTML5, CSS3
Backend & Databases: Node.js, Express.js, MongoDB, MongoDB Atlas, Mongoose, RESTful APIs
Authentication & Cloud: JWT Authentication, bcrypt, AWS (EC2, S3), Firebase, Cloudinary
Tools & Workflows: Git, GitHub, Version Control, Agile/Scrum Development, Clean Code Practices, CRUD Operations

PROFESSIONAL EXPERIENCE

Freelance MERN Stack Developer

Jan 2025 – Present

Remote

- **Engineered full-stack applications** utilizing **React.js**, **Node.js**, **Express.js**, and **MongoDB** to deliver production-ready, highly responsive web solutions.
- **Collaborated directly with clients** to extract technical requirements, manage project scope, implement custom features, and rapidly resolve critical cross-browser bugs.
- **Architected secure backend pipelines** by implementing industry-standard **JWT Authentication**, protected route middlewares, and credential data hashing via **bcrypt**.
- **Streamlined cloud infrastructure** by successfully integrating **Cloudinary** for optimized asset storage, **Firebase** for real-time services, and **MongoDB Atlas** for scalable data persistence.
- **Optimized cross-platform performance** and interface responsiveness across diverse mobile and desktop viewports, drastically reducing client-side latency.
- **Maintained strict version control** workflows using **Git** and **GitHub** to ensure transparent project delivery and clean code deployment histories.

PORTFOLIO PROJECTS

Blogify – Full-Stack Blogging Platform

2025 – Present

[Live Production Link](#)

Technologies: MERN Stack, JWT, Cloudinary, Bootstrap

- Developed an end-to-end blogging platform integrated with JSON Web Tokens (JWT) for secure, session-persistent user authentication.
- Integrated **Cloudinary API** to handle multi-format image uploads, reducing server-side processing load and optimizing asset delivery speeds.
- Implemented an intuitive, responsive admin dashboard supporting comprehensive **CRUD operations** and dynamic metrics analytics.

E-Commerce Application

2024

Technologies: React.js, Node.js, Express.js, REST APIs, Tailwind CSS

[Live Production Link](#)

- Designed reusable **React.js** components integrated with a dynamic global state management architecture to handle live product catalogs.
- Built scalable **REST APIs** for seamless front-to-back data streaming, successfully decreasing interaction latency and UI layout shifting.
- Focused deeply on client-side latency reductions to ensure high-performance, seamless UX transitions across all viewports.

Authentication & Management System

2024

Technologies: Node.js, Express.js, MongoDB Architecture

[Live Production Link](#)

- Architected secure backend REST APIs from scratch leveraging professional corporate enterprise design patterns.
- Implemented industry-standard JWT/bcrypt credential hashing systems and protected gateway route middlewares.
- Designed a highly scalable user management database structure optimized for lightning-fast querying and structured indexing.

ACADEMIC PROJECTS

Hostel Management System

Academic Term Project

Technologies: Java, Object-Oriented Programming (OOP), Relational Database Concepts

- Designed and developed a functional desktop-based Hostel Management System applying clean MVC principles.
- Leveraged core Object-Oriented Programming fundamentals, utilizing inheritance, encapsulation, and abstraction to build a modular system architecture.
- Implemented user-focused features including room allotment tracking, student resident profiles, fee billing records, and multi-parameter search capabilities.
- Structured relational data tables with sound indexing to model interactions between residents, room availability parameters, and administrative operations.

EDUCATION

Bachelor of Science (BS) in Computer Science

Expected Graduation: 2026

The Islamia University of Bahawalpur

Final Year Student

Relevant Coursework: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Java Programming, Database Systems, Software Engineering, Web Engineering, Operating Systems, Computer Networks, Design & Analysis of Algorithms

LANGUAGES

English: Limited Working Proficiency | **Urdu:** Native Speaker
